1. one widget has to open on customer's own button click
2. Product Streak on Login Page / Signup / Reset Prod. Pages
3. OAuth ↓
4. widget Iframe defect. → ①
5. Image upload !! → ~~Backlog~~   20. document. current Script
6. CI/CD ↑
7. Dev Env. ↑
8. Socket/key communication in new UI ✓.
9. Pop up ✓
10. mongo DB community edition for dev/BA } setup cloud clusters
    — " Enterprise " for Prod }
11. ALB – Scalability configuration ① ↓
12. monitoring Product Streak application ↑
13. App id / tenant id   15. Form Builder customization
14. List view   16. Automated testing
    Saas software   17. Position of widget needs to be
    Domino   fetched from backend db store.
    * make default   18. Signup – user already Exists
   19. login – Incorrect user Email / Password
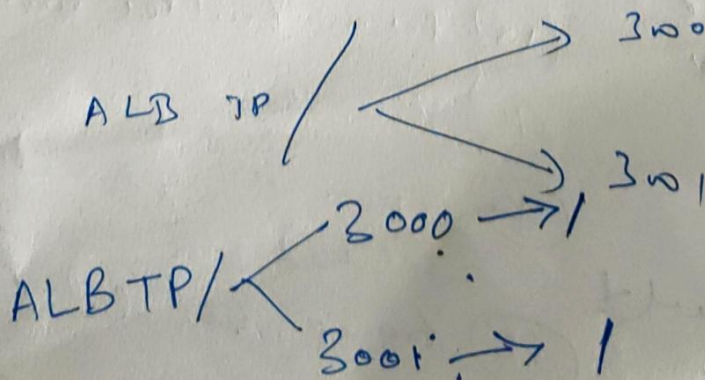

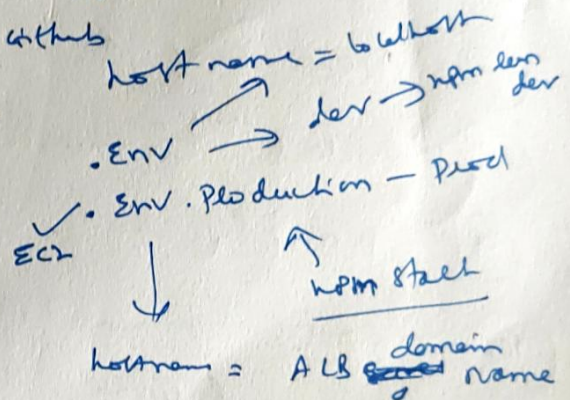

EC2 Server

3000 — Prod Streak /widget

3001 — Prod Board

5001 — websocket server

Browser   AWS   EC2   widget iis
                  LB   3000 — 2
                                       3001
                                       5001

                  Rules   Externalisation

⓪ create new folder & clone from github   host name = localhost

① creation/customisation of widget   .Env → dev → npm run dev

② New folder — clone from repo   ✓ .Env.Production — Prod
                                  EC2   ↓   ↑
③ Externalise   hostname = ALB domain name   npm start

④ push to github

⑤ merge new changes to New folder

⑥ push this code to new branch of github

                                              → 3000
          ALB IP /
                    ←
                      3000 → 1
ALBTP / <   .
                      3001 → 1
                        .
